MANUSCRIPT TITLE

- Title of the manuscript should express the main goal of the conducted research by a short and brief sentence describing the contents of the manuscript, and avoiding abbreviations and informal English language
- Title should be preferably limited to between 12 to 17 words
- Location, city or country of the conducted research should not be included in the title
- Abbreviations should be avoided in the title
- A running title (short title) should be provided when submitting the manuscript
- Redundant phrases such as “A study of”, “An experimental investigation of”, “Results”, “Methods” should be avoided in the title
- Title should not include more than two addresses for each author
- It is recommended to create the title after the manuscript is ready

AUTHORS’ NAMES

- First letter of an author’s first name and middle name should be included before the last name
- Name of authors should be ordered by the value of their contribution
- Authors’ academic rankings should not be included in the title

ABSTRACT

- Abstract should give brief information about aims, findings, methods and results of the research conducted in the article at a glance
- Number of words in the abstract should be limited to between 150 to 250 words
- References should not be included in the abstract
- Abbreviations should be avoided in the abstract
- Contents of the abstract should be brief and include four to five findings at most
- The study quantitative data are required to be included at the abstract body

KEYWORDS

- Keywords should be limited to between 5 to 7 words
- Keywords should be written alphabetically under the abstract, placing semi-colon in between
- Keywords words must be started with capital letter
- Corresponding Author’s e-mail address, telephone and fax number should be included

INTRODUCTION

- Introduction expresses the importance and aims of the research conducted
- Introduction includes an overview of the subject and literature of the study with references using the referencing style of the journal (i.e. Vancouver system, Harvard referencing style or others)
- Introduction expresses, explains and compares a priori studies and the current study in order to justify the need for conducting the research
- Acquisition of references from other authors without permission is considered professional misconduct
- Materials, methods, results and conclusions obtained from the research should not be included in the introduction
- At first, the introduction section presents particular problems studied and strategies adopted to conduct the research, including the following cases:
  - Why is this research important?
  - How does this study relate to a priori scientific studies and works?
  - What are the primary and secondary aims and consequences of the study?
  - How do the design and hypotheses of the study relate to each other?
  - What are the theoretical and practical concepts related to the research?
- Quotes, references to the subject literature or suggested readings for further study are preferably written in the introduction
- References in an original article should be preferably not older than ten years as far as possible
- Location of the conducted research can be mentioned at the end of this section
MATERIALS AND METHODS
- This section manifests itself when enough empirical and experimental achievements have been provided.
- The location and type of investigation (teamwork or individual work) should be mentioned and hypotheses should be clearly stated.
- Scientific methods and principals involved in the study should be clearly stated.
- Units of measurement should be stated in SI units.
- Exact references to the literature describing the tests performed in the study or the statistical data should be made.
- All figures and graphs should be created and submitted in XLS format using Excel.
- All photos or images should be submitted in JPEG format with 300 dpi resolution.
- All mathematical equations and formulas should be created using Microsoft Word’s equation toolbox.
- All maps must indicate the scale and the north direction.

RESULTS AND DISCUSSION
- This section should describe the outcomes of the study.
- Data should be presented as concisely as possible.
- Results may be demonstrated using tables and figures, if appropriate. However, large tables should be avoided as far as possible.
- The discussion section should give an interpretation of the significance of the results obtained with reference to similar works done by other authors.

CONCLUSION
- This section should highlight major, important discoveries explained in the manuscript and state the added value of main findings without reference to the literature.

ACKNOWLEDGEMENT
- An acknowledgment statement expresses your gratitude to individuals or organizations for assistance, but not direct involvement, in conduct of the research. This section should appear at the end of your article before the list of references and is compulsory to be placed.
- Contributors not meeting the criteria for authorship should be listed in the acknowledgements section.
- In case of financial support or funding for the conduct of research, authors are required to acknowledge their funding and financial support under the acknowledgements section. The name of organizations, grant certifications and relevant information should be fully and clearly stated.

CONFLICT OF INTEREST
Authors should declare any possible conflicts of interest before the reference section in order to publish their manuscript:
“The author declares that there is no conflict of interests regarding the publication of this manuscript. In addition, the ethical issues, including plagiarism, informed consent, misconduct, data fabrication and/or falsification, double publication and/or submission, and redundancy have been completely observed by the authors.”

ABBREVIATIONS (NOMENCLATURES)
Include a list of abbreviations and chemical symbols. All abbreviations’ are used in the text they should be defined in the text at the first use and a list of abbreviations should be provided. Abbreviations list must be arranged alphabetically according to the left column.
GRAPHICAL ABSTRACT
A Graphical Abstract must be produced according to the main findings of the manuscript research story summarizes visually and pictorially. Providing some selected manuscript graphs, tables, images, diagram or text cannot be assumes as Graphical Abstract! In order to learn more, refer you to the Graphical Abstract Guideline produced by Elsevier Publisher as the below link or looking at the GJESM Published articles:
https://www.elsevier.com/authors/journal-authors/graphical-abstract

HIGHLIGHTS
The provided RESEARCH highlights must be according to the research output and novelty of a manuscript not as the research aims and methodology. They must be provided into 3 to 4 statements.

REFERENCES
- All references should be cited throughout the manuscript as well as mentioned under the references section
- References should be ordered alphabetically and then chronologically
- Number of references extracted from each journal should not exceed the average acceptable amount which is between 5 to 7 citations
- It is recommended that the number of references should be more than 30 for original articles and less than 100 for review papers
- It is strictly recommended that authors cite recent references from the 10 years journals publication rather than old references
- Finally, avoid self-citations for the GJESM Journal references.

Example of writing a reference as sample:
